Answer: To find the number of days:

Number of days = Total sugar / Sugar used per day

$$= \left(\frac{3}{4}\right) \div \left(\frac{1}{8}\right)$$

$$= \left(\frac{3}{4}\right) \times \left(\frac{8}{1}\right)$$

$$= (3 \times 8) / (4 \times 1) = 24 / 4 = 6 \text{ days}$$

The sugar will last for 6 days.

Sample MCQs with Answers: Deep Dive into Core Areas

- Basics of Computing and Data Representation

Q1: Which of the following is the smallest unit of data in a computer?

- a) Byte
- b) Bit
- c) Word
- d) Nibble

Answer: b) Bit

Explanation:

A bit (binary digit) is the most basic unit of data in computing, representing a value of 0 or 1. A byte consists of 8 bits, nibble is 4 bits, and word varies depending on the architecture but is generally larger than a byte.

Q2: Which number system is primarily used internally by computers?

- a) Decimal
- b) Binary
- c) Octal
- d) Hexadecimal

Answer: b) Binary

Explanation:

Computers operate using binary systems because their hardware relies on digital circuits that switch between two states: ON and OFF, represented as 1s and 0s. While other systems like hexadecimal are used for ease of reading, binary remains the core.

- Programming Languages and Logic

Q3: What does the acronym 'CPU' stand for?

- a) Central Process Unit
- b) Central Processing Unit
- c) Computer Personal Unit
- d) Central Processor Unit

Answer: b) Central Processing Unit

Explanation:

The CPU is the primary component of a computer responsible for executing instructions and processing data. It acts as the brain of the computer.

Q4: Which of the following is a high-level programming language?

- a) Assembly
- b) Machine code
- c) Python
- d) Binary

Answer: c) Python

Explanation:

Python is a high-level programming language known for its simplicity and readability. Assembly and machine code are low-level languages, closer to hardware.

- Data Structures and Algorithms

Q5: Which data structure uses LIFO (Last In First Out) principle?

- a) Queue
- b) Stack
- c) Linked List
- d) Array

Answer: b) Stack

Explanation:

A stack follows the LIFO principle, meaning the last element added is the first to be removed. Queues follow FIFO (First In First Out).

Q6: Which algorithm is used for searching an element in a sorted array efficiently?

- a) Linear Search
- b) Binary Search
- c) Bubble Sort
- d) Selection Sort

Answer: b) Binary Search

Explanation:

Binary search divides the array and compares the middle element, reducing the search space efficiently for sorted data, achieving logarithmic time complexity.

- Computer Architecture and Organization

Q7: Which component of a computer is responsible for executing instructions?

- a) RAM
- b) CPU
- c) Hard Drive
- d) Motherboard

Answer: b) CPU

Explanation:

The CPU executes instructions fetched from memory, orchestrating operations within the computer.

Q8: In a typical computer system, what does the ALU stand for?

- a) Arithmetic Logic Unit
- b) Automated Logic Unit
- c) Application Logic Unit
- d) Arithmetic List Unit

Answer: a) Arithmetic Logic Unit

Explanation:

The ALU performs arithmetic and logical operations within the CPU.

- Operating Systems and File Management

Q9: Which of the following is NOT an operating system?

- a) Windows

- b) Linux
- c) Oracle
- d) macOS

Answer: c) Oracle

Explanation:

Oracle is a database management system, not an operating system. Windows, Linux, and macOS are OS.

Q10: What is the primary purpose of an operating system?

- a) To process data
- b) To manage hardware and software resources
- c) To compile programs
- d) To connect to the internet

Answer: b) To manage hardware and software resources

Explanation:

An OS manages hardware components like CPU, memory, storage, and peripherals, providing a platform for applications to run.
